HOL-OCL
A Formal Proof Environment for UML/OCL

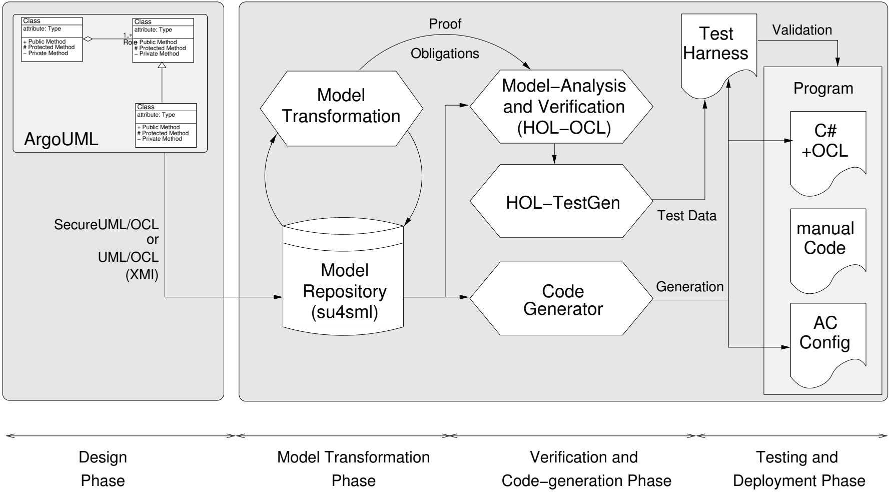
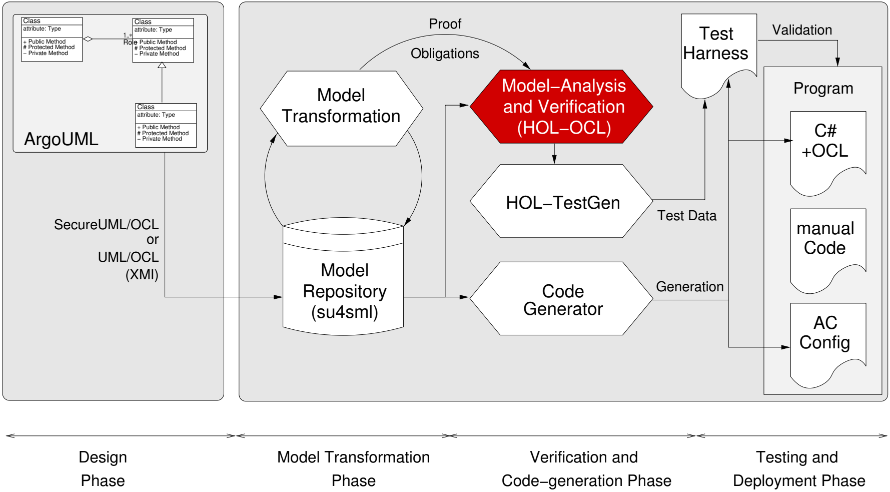
The HOL-OCL Vision:

Tool Supported Formal Methods for (Model-driven) Software Development

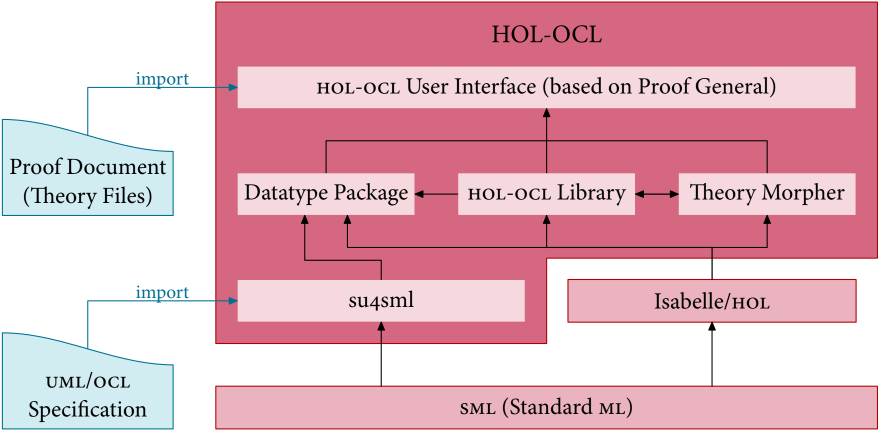


The HOL-OCL Vision:

Tool Supported Formal Methods for (Model-driven) Software Development



The HOL-OCL Architecture



Conclusion

- We presented HOL-OCL providing:
  - a formal, machine-checked semantics for OO specifications,
  - an interactive proof environment for OO specifications,
  - publicly available:
    `http://www.brucker.ch/projects/hol-ocl/`,
  - next (major) release planned in July 2008.
- HOL-OCL is integrated into a toolchain providing:
  - code generators,
  - a transformation framework (including PO generation),
  - support for SecureUML.

Ongoing and Future Work

- Ongoing work includes the development of support for:
  - well-formedness-checking,
  - proof-obligation generation (Liskov, Refinement,),
  - consistency checking,
  - Hoare-style program verification,
  - better proof automation.
- Future works could include the development for
  - integrating OCL validation tools, e.g., USE,
  - test-case generation (i.e., integrating HOL-TestGen),
  - supporting SecureUML.
  - ....
